

Healthy Auburn Waters

Principles of Good Stewardship

We Pledge! Our business does our part to keep Auburn waterways clean and healthy by being good stewards of our environment. We have committed to the following practices and by doing so encourage other individuals and businesses to adopt these healthy practices:

- ◆ Our business has a method to prevent cooking fat, oil and grease (FOG) from going down our sink drains and we dispose of FOG properly.
- ◆ Our business has made a commitment to recycle as much waste as possible.
- ◆ Our business has eliminated all banned chemicals and pesticides from our facility and disposed of them at a hazardous waste collection facility or other approved location.
- ◆ Our business disposes unused, outdated or leftover chemicals, pesticides and other hazardous waste at a licensed hazardous waste collection facility like the Western Placer Waste Management Authority.
- ◆ Our business does not pour chemicals, cleaners or any other items into the storm drains.
